

Thailand - Japan Corporation for Industry 4.0

Industry 4.0 Promotion Policy of Japan suitable for Thailand

1. WASCOR research project

If there is cooperation between Japan and Thailand, the WASCOR research project will promote cooperation and knowledge transfer among researcher groups, developers and owners of automation systems with direct industry experience in Japan. These result in creation of researcher groups, developers and owners of automation systems to develop robots and automated production systems in Thailand.

2. Policy on the development of equipment and software standards of the country

If there is cooperation between Japan and Thailand, It will convey the concepts and guidelines for setting up and standardizing the equipment and software used in automated production systems. To become the standard of Thailand, SMEs can access and bring automatic production system to the factory because of low price of the automatic production system and low maintenance costs. It makes repair and maintenance are easily.

3. Policy to support the dissemination of automatic production systems to SMEs

If there is cooperation between Japan and Thailand, It will encourage the transfer of technology and share information on the best and most advanced technology developed for SMEs in each industry from Japan to Thailand.
